

Transport of
log bundles.

Fork for log bundles

- Hydraulic tips closing
- Supporting tubular and grabbing tubes of high thickness
- Lifting joint 2 category (3 category on request)

Easy bundles transport.

The double fork HFB2 is the perfect equipment for people that own HLB1 log bundler and want to prepare the bundles first and then transport them or it can be used with a tractor with an anterior lifter where it is possible to transport 3 bundles at the same time: one inside the log bundler HLB1 and two with HFB2. In this way every transfer is optimized, reducing time and costs.

The tips of the HFB2 fork are resealable hydraulically so to respect the road laws during the unloaded transports that become safe and agile.
