

Wood logs
transport.

Logs fork and grab

- Solid structure
max load 1500 kg
- Tractor linkage 2 + 3 category
- Big transportable volume
- Perfect for logs
from 100 to 250cm of length

To transport in safety.

HGRIP is equipped with two closing arms connected between them that clamp and tighten the wood logs to guarantee maximum safety during transport without any additional binding.

The closing grab is activated by two hydraulic cylinders with valve bloc, therefore even if an accidental damage occurs to the oleo dynamic system or to the pipes, you won't risk to lose the loaded wood logs.

The horizontal fork tips are resealable to reduce the dimension during the unloaded transport. The logs fork for can be installed on 3 points on tractors, telescopic elevators and frontal loader.
